

DSECONTROL[®] MONITORING WITH INTELLIGENCE.

DSE7210 & DSE7220

AUTO START & AUTO MAINS FAILURE CONTROL MODULES

The DSE7210 and DSE7220 are new control modules for single gen-set applications. The modules have been developed from the successful DSE5210 and DSE5220 Series and incorporate a number of advanced features to meet the most demanding on-site applications.

The DSE7210 is an Automatic Start Control Module and the DSE7220 is an Auto Mains (Utility) Failure Control Module. Both modules have been designed to start and stop diesel and gas generating sets that include electronic and non-electronic engines. The DSE7220 includes the additional capability of being able to monitor a mains (utility) supply.

Both modules are simple to operate and feature a newly designed menu layout for improved clarity. Enhanced features include a real time clock for improved event and performance monitoring, the ability to display any language on screen and a 132 x 64 pixel LCD display.

FEATURES

- Backed up real time clock
- Multiple date and time maintenance scheduler*
- 132 x 64 pixel LCD display
- Configurable display languages
- Programmable event logging (30), showing reason, date and time
- Customer logo display capability*
- USB connectivity
- Robust module enclosure
- Five key menu navigation
- Durable soft touch membrane buttons
- Fully configurable via PC software
- Front panel editor
- LED and LCD alarm indication
- Engine exercise mode
- Configurable start & fuel outputs*
- kWh monitoring
- Automatic load transfer
- Configurable inputs
- Configurable outputs
- Configurable timers and alarms
- Magnetic pick-up
- Power save mode
- PIN protected programming
- PDA compatible PC software*

BENEFITS

- 132 x 64 pixel ratio makes information easy to read
- Real time clock provides accurate event logging
- PC software is license free
- Set maintenance periods can be configured to maintain optimum engine performance
- Advanced PCB layout ensures high module reliability

OPERATION

The modules are operated via the START, STOP, AUTO and MANUAL soft touch membrane buttons on the front panel. The DSE7220 also has a TEST button. Both modules include load switch buttons. The main menu system is accessed using the five navigation buttons to the left of the LCD display.

SPECIFICATION

DC SUPPLY

CONTINUOUS VOLTAGE RATING

8V to 35V Continuous

CRANKING DIP PROTECTION

Able to survive 0V for 50mS, providing supply was at least 10V before dropout and supply recovers to 5V. This is achieved without the need for internal batteries

CHARGE FAIL/ EXCITATION

0V to 35V fixed power source 2.5W

MAXIMUM STANDBY CURRENT

160mA at 12V 80mA at 24V

MAXIMUM OPERATING CURRENT

340mA at 12V 160mA at 24V

ALTERNATOR INPUT

- **2** (Front of module when installed into the control panel WITHOUT being sealed to the panel)

CONFIGURATION

The modules can be configured using the front panel buttons or by using the PC Software and a USB lead.

INPUTS & OUTPUTS

Analogue inputs are provided for oil pressure, coolant temperature and fuel level. These connect to conventional engine mounted resistive sender units to provide accurate monitoring and protection facilities. They can also be configured to interface with digital switch type inputs for low oil pressure and high coolant temperature shutdowns.

High Powered FET's are provided for fuel solenoid output, start output and four additional configurable outputs. On these configurable outputs a range of different functions, conditions or alarms can be selected.

INSTRUMENTATION

The modules provide advanced metering facilities, displaying the information on the widescreen LCD display. The information can be accessed using five menu navigation buttons to the left of the display.

EVENT LOG

The modules include a comprehensive event log that shows the 30 most recent alarm conditions. This feature is enhanced by the real time clock, as it allows each alarm condition to be stamped with the date and time. The event log display's the fault condition, time and date all on one page.
